DIGITAL SCREEN COMMUNICATION ON YOUR OWN NETWORK

Every screen. Your story.

One change here. Visible there, straight away.

Install TulipCast Studio on a suitable Windows PC or laptop. Create pages, schedule playlists and publish to one screen or a group. No dedicated server is required.

Android | Windows | Compatible browser - both screen formats

Create it. Schedule it. Share it.

01

Create your own page

Text, images, video, ticker and clock. With fonts, bold, italic and your colours.

02

Publish at the right time

Publish now, at a set date and time, or daily on selected days. For one screen or a group.

03

Stay in control

Content on your own network, local player storage and clear management permissions.

For reception, hospitality, retail, workplaces, education and events.

From your first design to every screen.

One system for content, scheduling and everyday management.

Content builder

Design freely in 16:9 and 9:16. Text, images, video, information blocks, ticker and clock. Choose fonts, bold and italic, colours, transparency and blur.

Templates & starter content

100 standalone starter templates plus 22 three-page sets. With photos and themes, from hospitality and computer services to Christmas and Easter. Fully editable.

Playlists & scheduling

Prepare playlists in advance. Assign them to screens or groups. Schedule once or repeat daily and on selected weekdays. Change times and targets when needed.

Screens & groups

Shared playlists, group colours and previews. Orientation, rotation and mirroring from Studio have been tested on Android. Application on Windows is still being checked.

Local & offline

After synchronisation, players independently play fully available local content, even when the management PC is off. Studio does not need to stay on for this. External websites and streams may need a connection.

Everyday management

User roles, screen monitoring and emergency messages. One page for backups, restore and automatic local backups. Studio can optionally run as a Windows service on your PC or laptop.

GETTING STARTED

1. Start TulipCast Studio

Runs on a suitable Windows PC or laptop. No separate server is needed.

2. Connect your Player

Android box, Windows PC or compatible browser.

3. Publish content

Create a page or playlist and choose your screens.

Practical information

Android: installation minimum 4.4 (API 19), with a compatible WebView; older devices have not been tested. External websites may need internet. Autostart and browser support depend on your device. Configure CEC on the Android box. No cloud portal.
